CYQLO is a start-up launched by AverLogic Technologies Corp.

CYQLO, enters the market with a feature-rich device that goes one step further by incorporating 7 accessories in just one device: Bike navigation, cycle computer, camera, Anti-theft alarm, frontal light, bell and built-in power bank. There are too many different devices for different purposes, and they take time to set-up, cost money and overload the bicycles; CYQLO is completely different.

The CYQLO team is passionate about cycling and product design. The goal when they designed CYQLO was clear: "A small change leads to a big impact. If cyclists become more comfortable with each ride, the number of rides that people take will increase significantly. We hope CYQLO can help to create a bike-friendly world."

### PRODUCT

### CYQLO

CYQLO, enters the market with a feature-rich device that goes one step further by incorporating 7 accessories in just one device: Bike navigation, cycle computer, camera, anti-theft alarm, frontal light, bell and built-in power bank. There are too many different devices for different purposes, and they take time to set-up, cost money and overload the bicycles; CYQLO is completely different.

CYQLO addresses the current needs of an increasing number of bike commuters, bicycle travelers, bike couriers, and cyclists. There is room for improvement in the existing bike navigation systems. CYQLO offers an intuitive and easy way to lead cyclists to their destination. The device combines a light ring with turn-by-turn signals, contextual sounds and a LED display that indicates the distance to the next turn. It improves significantly the navigation experience and reduces misunderstandings during the

journey.

On the other hand, the increasing popularity of cycling as a sport and a mean of transportation has made bicycles an easy target for thieves. It is estimated that over 1.5 million bicycles are stolen every year in the USA. CYQLO automatically locks on the handlebar and the user can easily unlock it using the CYQLO app. Every time someone tampers with the bike, CYQLO will trigger a 100 dB alarm and the CYQLO camera will send a real-time video to the user's smartphone.

A remarkable new function for long distance cyclists is the built-in Power Bank. Cyclists will keep their devices fully charged, letting them stay in touch during their rides. At the same time, they can keep their smartphones safe in their pockets. CYQLO will notify them of incoming calls or SMS with a simple blue LED light on the light ring.

CYQLO pairs by Bluetooth with the CYQLO app, available on iOS and Android. The CYQLO app also offers some critical functions. Cyclists can design their bike routes, include stops in different locations, and attach pictures as well as notes. After they save their rides, they can share them with other CYQLO app users. Bike travelers will enjoy the QR code function by scanning any QR code route and start to navigate it.

The CYQLO team is passionate about cycling and product design. The goal when they designed CYQLO was clear: "A small change leads to a big impact. If cyclists become more comfortable with each ride, the number of rides that people take will increase significantly. We hope CYQLO can help to create a bike-friendly world."

CYQLO will be formally introduced at Taipei Cycle Week 2018, and at Taipei Cycle D&I Awards 2018.

The market launch of CYQLO is expected at the end of this year.

Some important technical features about CYQLO:

Size

With mounting bracket

Height: 113.75 mm

Width: 93.45 mm

Depth: 83.88 mm

Operating Temperature: -10°C ~ 50°C

### PRODUCT

#### All-wings saddle type-Falcon

All-wings saddle is a new generation full-featured bicycle saddle. And it combines ergonomics, innovative riding mechanics and the post-modern design.

The center of the saddle is completely hollowed. Whether you're on 24 hours ride or a 500 km long-distance challenge, the pressure on the perineum is always zero, which greatly reduces the burden on the legs and allows you to ride faster, longer and further.

Every cyclist can surpass all his own peak records easily after proper practice.

### SERVICE

## ODM

We offer the design and manufacture of a full wing saddle, and we can also attach the customer's logo according to the customer's request.

# Ming Fong Technology CO., LTD

## Organisation

Country Taiwan  
City New Taipei City  
Street

## Person

Name Chloe Cheng  
Sales Representative

## Organisation

Ming Fong Technology started out from the professional steel mold manufacturing in 1984. From that time, the company began cooperating with major 3C companies in Taiwan and striving for developing multi-color shot injection molding technology. In 2001, it set up the first molding factory in Taiwan, and successfully earned the certification from major manufacturers in US and Asia. With its continuous efforts in injection molding technology, it has become the leading manufacturer in Asia.

Ming Fong, headquartered in New Taipei City, is one of the few companies which still maintain mass production facilities in Taiwan. Ming Fong has its own tool shop, molding factory and assembly lines in Taiwan. By working with the world's top tier customers for many years, it can effectively save customer's time and cost of production development.
